STACK

MOBILE
Flutter · Dart · FlutterFlow · Kotlin

LANGUAGES
TypeScript · Python · Go

WEB FRONTEND
React · Next.js

BACKEND
FastAPI · Node.js · Django REST · NestJS

DATABASES AND STORAGE
PostgreSQL · Redis · Firebase · Supabase

AI IN THE PRODUCT
OpenAI API · Anthropic Claude · Gemini · Векторный поиск

INFRASTRUCTURE AND DEVOPS
Docker · Nginx · Caddy · GitHub Actions

MONITORING
Sentry · Prometheus · Grafana · Loki

PAYMENTS AND SUBSCRIPTIONS
CloudPayments · ЮKassa · T-Bank · Продамус

TELEGRAM
Telegram Bot API · Mini Apps · aiogram

ANALYTICS
AppMetrica · Amplitude · A/B-тесты

DESIGN
Figma · Дизайн-токены · Rive · Lottie

TESTING
pytest · Vitest · Playwright · TDD

HOW I WORK

I run a project without a manager: gathering requirements, estimating and owning the deadline

I fit into someone else's process — sprints, code review, tasks in a tracker — without bending it to my habits

I take the lead on work that needs people and decisions brought together

I explain technical decisions to a non-technical client, without jargon and without condescension

I say no and offer a cheaper route when the task calls for it

I mentor junior developers, which means I can explain and not only build

ABOUT

Fullstack development and design: mobile apps, web, Telegram bots, backend and infrastructure. I take a product from brief to release, so you do not have to assemble a row of contractors and keep them in sync.

40+

APPS AND SERVICES

4

MARKETS

2022

FIRST PAID WORK

WORK EXPERIENCE

2022 — NOW

Independent practice

Fullstack developer and designer

End-to-end products for clients in Russia, the UAE, Azerbaijan and Southeast Asia: marketplaces with payments, subscription apps, Telegram bots and self-hosted infrastructure.

2024 — 2025

Product company

Middle fullstack developer

In-house product development: took part in shaping the idea, wrote the backend and built AI features. Team process in Yandex Tracker, leading on part of the work.

2025 — NOW

AppFyl

Senior fullstack developer

A development studio: client products from mockup to release — mobile apps, web, backend and interfaces. Delivered inside the studio's process: briefing, review, handover.

SELECTED PROJECTS

Personal Safety App

PERSONAL SAFETY

One button: an emergency report, coordinates to trusted contacts, camera video

Subscription VPN Service

TELECOM AND PRIVACY

A bot, a mini app and an admin panel over an own billing system and node agents

Escrow Gig Marketplace

GIG WORK AND SERVICES

Money is held by the platform and released to the worker only after the job

Creator Subscription App

MEDIA AND CREATOR ECONOMY

Educational content, community and an AI twin of the author, by subscription

E-commerce Site with CMS

FUNERAL FLORISTRY

Replacing a legacy site: catalogue, orders into a CMS and a messenger, built for search

AI Job and Talent Matching

HIRING, SOUTHEAST ASIA

Resumes and vacancies are assembled in a dialogue, and matching runs on vector search

WHAT I DO

Marketplaces with money

Escrow: holding payment and releasing it after the job · Platform commission and an in-app wallet

Payments

Card acquiring with holds and payouts · Subscriptions and recurring charges

AI in the product

AI as an input method: a dialogue instead of a form · Vector search by meaning rather than words

Backend and infrastructure

Self-hosted platform: schema, row-level security, triggers, edge functions · An own Python API with a background job queue

Maps and geo

Routes with waypoints · Distance search and marker clustering

Telegram

Bots and mini apps · Payments inside the messenger

Web and admin panels

Next.js with a CMS and an own database · Admin panels for moderation and partner management

Design

I work with a designer, so layouts arrive finished instead of being invented during markup · Simpler interfaces and fixes I draw myself, without waiting on a contractor

ALSO

Mentoring junior developers.

Entrepreneurial background: I read unit economics and understand where a product makes money.
